

IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

Attorney Docket No. 017661/0181

Applicant: Takashi NAKAGAWA

Title: SIGNAL TRANSMISSION DEVICE OF BASE STATION AND CDMA
MOVABLE COMMUNICATION SYSTEM USING SAME

Serial No. 10/048,059

Filed: June 6, 2002

Examiner: Unassigned

Art Unit: 2681

RECEIVED

JAN 02 2004

Technology Center 2600

**INFORMATION DISCLOSURE STATEMENT
UNDER 37 CFR §1.56 and 37 CFR §1.97**

Commissioner for Patents
P.O. Box 1450
Alexandria, Virginia 22313-1450

Sir:

Submitted herewith on Form PTO-SB08 is a list of documents known to Applicant in order to comply with Applicant's duty of disclosure pursuant to 37 CFR 1.56. A copy of each listed document is being submitted to comply with the provisions of 37 CFR 1.97 and 1.98.

The submission of any document herewith, which is not a statutory bar, is not intended as an admission that such document constitutes prior art against the claims of the present application or that such document is considered material to patentability as defined in 37 CFR §1.56(b). Applicant does not waive any rights to take any action which would be appropriate to antedate or otherwise remove as a competent reference any documents which is determined to be a prima facie prior art reference against the claims of the present application.

TIMING OF THE DISCLOSURE

The instant Information Disclosure Statement is believed to be filed in accordance with 37 C.F.R. 1.97(b), prior to the mailing date of a first Office Action on the merits (first scenario). If that is not the case, such as in a second scenario in which a first Office Action on the merits has been mailed before the filing of the instant Information Disclosure Statement, then either a certification or fee is required, and a certification is provided below. If neither of the first or second scenarios is the case, such as if a final Office Action or a notice of allowance has been mailed by the PTO (third scenario), then both a certification and fee are required, and in that case a certification is provided below and also the PTO is authorized to obtain the necessary fee to have the instant IDS considered, from Foley & Lardner Deposit Account #19-0741.

CERTIFICATION

The undersigned hereby certifies in accordance with 37 C.F.R. §1.97(e)(1) that items of information A3 and A4 listed on the Form PTO SB/08 submitted with this Information Disclosure Statement were first cited in a communication from a foreign patent office in a counterpart foreign application not more than three (3) months prior to the filing of this Statement. Items of information A1 and A2 are U.S. patents that are counterparts to items of information A3 and A4, respectively.

RELEVANCE OF EACH DOCUMENT

A translation of a portion of a Korean Office Action that issued October 15, 2003 with respect to a counterpart Korean patent application is provided below.

"The invention of the present application relates to a base station transmitter which, in a variable attenuation means capable of controlling the level attention of a modulation output signal on the input side of a transmission amplification mean, keeps the input of the transmission amplification means from exceeding a

limit value, as well as to a mobile communication system employing said base station transmitter, with Scope of Patent Claims 1 and 3 being for a "base station transmitter distinguished in that it prevents occurrence of transmission spectrum distortion, whereby the input of a transmission amplification means is kept from exceeding a limit value by a variable attenuation means, comparing it to a threshold value and notifying a higher level control device."

However, it is judged that the aforementioned claims of the invention of the present application could have been easily invented by a person having ordinary knowledge in the technical field in question by combining "a base station transmission power control method whereby the transmission power for all channels is computed and compared to a maximum power value, and the power attenuation rate is computed and stored to control the transmission for transmission channels," which constitutes the technical features of appended Japanese Unexamined Patent Application Publication H11-74834 (16 March 1999; Cited Reference 1), which is in the same technical field, and "a mobile communication system based on a transmission power control unit which computes the sum of the transmission power signals for the channels," which constitutes the technical features of the appended Japanese Unexamined Patent Application Publication H9-36801 (7 February 1997; Cited Reference 2), which is in the same technical field (Article 29, Paragraph 2 of the Patent Law)."

Applicant's statements regarding the Korean Office Action are based on a partial translation that Applicant's representative obtained. These statements should in no way be considered as an agreement by Applicant with, or an admission of, what is asserted in the Korean Office Action.

Applicant respectfully request that the listed documents be considered by the Examiner and formally be made of record in the present application and that an initialed copy of Form PTO/SB/08 be returned in accordance with MPEP §609.

Respectfully submitted,

December 31, 2003
